

## GreenScapes Landscape Design Imaging Software Lesson 2

---

**Making a “Customized Plant Library” Starts with totally understanding where and how to save files and how the libraries work.**

**1. Saving Files Document:**

[http://www.landscapedesignimagingsoftware.com/images/support/1\\_savingfiles.pdf](http://www.landscapedesignimagingsoftware.com/images/support/1_savingfiles.pdf)

**2. Video on making a new library: [Click Here!](#)**

- 3. After reading the above: You should have already made the file on your C drive with your "Company Name" and within that should already be a "GreenScapes Folder." Within GreenScapes I want you to make one called Objects within that one make one called: “plants” (this is where you are going to save all your new objects and the plants you use the most)**
- 4. Like setting up QuickBooks this is time consuming but when completed it will really speed your design time.**
- Bring a plant you want to save on a background image.
  - With the plant highlighted right click – here you can change the name if so desired.
  - Highlight the name and right click and copy or Ctrl + C (I like doing this so I don't have to retype)
  - Click OK the plant is still high lighted
  - Go to File > Export Object
  - Path to your C drive > Company Folder > GreenScapes > Plants
  - The file format will default to .LOB
  - Right Click in the File Name field > select paste or use Ctrl + V
  - Now Click Save
  - This process needs to be done for each plant you would like in your custom library.
  - Bonus: You can group some plants together and export.
  - Now you will make a new library within GreenScapes the video above is very clear on how to do so, but if you still need assistance please fill out a [support ticket](#).

Please note:

- You can save where ever you would like. I explain using the company named folder so you only have to remember to back up that one folder. This also allows you to know where all your files are.
- Most of all GreenScapes defaults to the last file you opened, so you will always be in your Company Folder.
- The Company folder can also be copied over to the 2<sup>nd</sup> computer or worked from the Cloud or a third party like [Dropbox](#).

Always looking forward to working with you.
